

Idaro – Mobile comfort for little ones

Parents choose an optimal hospital for their child. One particular criterion for this choice is certainly the hospital's interior design and furnishings. Idaro, with its attractive, child-friendly design, a large choice of colours and its rounded form, is easy to handle and to clean. So it provides, not only visually, a good start for both mother and child.

The cot can be adjusted in height from 68 cm to 92 cm. Thus, it can not only be adjusted to the same height as the mother's bed to provide an easy view of the child, but also be set to a convenient working height for the nursing staff.

A further adjustment option is the inclination of the cot by up to 15° into an anti-Trendelenburg position. Well thought-out special features such as an easily visible name plate, an integrated storage basket and the option of pushing several trolleys into each other to save space during storage make the Idaro stand out from the rest and predestine it for everyday hospital use.

Idaro, an enrichment for the nursery ward.

Maximo – The children's bed with charm – safe and norm-compliant

The revised Maximo children's bed is Stieglmeyer's answer, in advance, to the anticipated requirements of the forthcoming new German standard DIN 32623 for children's beds. The focus is not only on the stricter requirements with regard to side guards, but also on a colourful and child-friendly design.

The familiar height-adjustable and tiltable mattress base promotes the well-being of the young patient and provides a convenient working height for the personnel. The height of the side guards can be continuously and noiselessly adjusted via a control pedal to enable quick and easy access to the child, whilst at the same time protection is provided against their misuse. The effective side guard height has been increased to 80 cm above the mattress base in the new model.

Optional Plexiglas panels in the headboards and footboards provide an unrestricted view and a more open appearance. The Maximo is perfectly equipped for day-to-day hospital life, with its swivel bin for nappies, a practical washing basket and its four wall deflection rollers for flexible use and the protection of materials.

With the Maximo too, the greatest importance was attached once again, during the selection of materials and their methods of application, to hygiene, robustness and suitability for daily use.
