

Drägersorb® 800+ Soda Lime

Soda lime is essential for CO₂ absorption in inhalation anesthesia machines with rebreathing systems.

Dräger is the only manufacturer of anesthesia machines that develops and produces its own soda lime. Therefore, Drägersorb 800+ addresses the specific needs of today's anesthesia technology.

- High CO₂ absorption capacity due to uniform utilization, pellet form prevents channel formation, longer lifetime reduces costs
- Little dust generation creates a safer environment for your personnel and protects your equipment
- Additional safety for patients, few undesirable reaction products if accidentally dried out
- Customer-friendly packaging ensures easy handling

ECONOMIC EXCELLENCE

Thanks to its unique pellet form, Drägersorb 800+ does not undergo channel formation. Our soda lime absorbs CO₂ evenly and is effectively utilized. Its pellet form and high porosity create an optimal surface. Drägersorb 800+ is therefore able to absorb more CO₂ and lasts longer than conventional soda lime.

CREATING A BETTER ENVIRONMENT

The shape and composition of the Drägersorb 800+ pellets enhance its strength and resistance to abrasion. This helps protect the lungs of both the patient and anesthesia staff. Dust emissions are harmful to high-tech anesthesia machines which is another reason why Drägersorb 800+ was developed to protect your valuable investments and reduce ongoing costs.

Disposable absorber

ADDITIONAL SAFETY

Drägersorb 800+ significantly reduces the generation of decomposition products if the soda lime accidentally dries out prior to use.¹ Drägersorb 800+ may be used with all halogenated inhalation anesthetic agents. Of course, only fresh soda lime guarantees optimal use for patients. A change in color from white to violet blue clearly indicates when the soda lime needs to be changed.

USER-FRIENDLY PACKAGING

The Drägersorb® CLIC disposable absorber for use with all modern Dräger anesthesia systems delivers a quick, clean and uncomplicated disposable solution.

Advantages of this system include:

- even greater convenience for anesthesia staff, no contact with soda lime
- absolutely no dust contact
- more complete utilization reduces costs; change absorber at any time, even during surgery, thanks to the non-return valve.

The Drägersorb CLIC disposable absorber for Dräger anesthesia systems is attached to the usual absorber holder by means of an adapter.

Drägersorb 800+ is also available in convenient 5 L containers.
